

Recycle Maple Tubing

- **Storage:** For efficient storage and transportation, coil or bundle tubing (tie bundles together with tubing) or cut into sections. Store dry tubing in large gaylord boxes or other containers, if possible.

- **Store under cover to keep dry.**

- **Collection:** Contact the Recycling Ag Plastics Program (RAPP) for details about drop off locations, schedule, and other arrangements: <nrl3@cornell.edu or 607-255-8444>.

Or NYS producers can call RAPP at 607-255-8444. VT producers can call or email Anne Macmillan, VT Agency of Agriculture: 802-828-3479, anne.macmillan@state.vt.us.

- **Most tubing can be recycled. PVC tubing cannot.** Newer tubing is PVC-free. To determine if old tubing is made from PVC plastic, cut off a small section and drop it into a glass of water. If tubing floats, it is acceptable. If it sinks, it is likely PVC.

- **Remove metal and wire.**

- **Nylon fittings and spouts do not need to be removed.**

- **Some dirt & residue are OK,** but keep tubing out of the mud!

- **Tubing must be dry.**

- **What happens next:** Your old maple tubing will be recycled into plastic lumber at a manufacturing plant right here in Upstate New York!
